

AWS Launch Templates

Standardizing EC2 Deployments for Scalable Infrastructure

Launch Templates let you pre-configure EC2 instance settings for easy, automated launches.

LAUNCH TEMPLATE -HOW IT WORKS

What is a Launch Template?

A blueprint for launching EC2 instances

Defines AMI, instance type, security groups, storage, and key pairs

Can include User Data scripts

Used by Auto Scaling Groups for consistent deployments

Why Launch Templates Matter

- Ensures repeatable infrastructure deployments
- Reduces human error during instance creation
- Enables automation in DevOps workflows
- Critical for scaling and high availability

Core Components

Amazon Machine Image (AMI)

Instance Type (e.g., t2.micro)

Security Groups

Storage Configuration (EBS)

User Data Scripts

IAM Roles

Launch Templates in Production Architecture

Integrated with Auto Scaling Groups

Supports versioning and updates

Used with Load Balancers

Foundation for scalable cloud architecture
